Founding Engineer. Payments, POS, and the closing portal.

The engineer behind the rails: the payment flows, the POS integrations that are the company's targeting filter, and the closing portal that just ran its first real franchise agreement. The work in this seat is what turns a signed brand into collecting revenue, which makes it the closest engineering seat to the money in the whole company.

~7 days
the Mindbody integration, shipped: full data pull, pre-baked units for the payment flow

5 POS
the coverage list that IS the targeting filter: Mindbody · Square · Crisp · Stripe · Toast

~1,300
units in the activation pool if the year lands: every one needs the rails this seat builds

100%
the activation standard: every unit under a signed brand, connected and collecting

1 · THE POSITION

Payments + POS integrations, reporting to Kayden.

OWNS

- **Payment flows:** collection rails, ACH, the invoice 2-way sync that unblocks Homefront, 2nd Family, and Melty at once
- **POS integrations:** the coverage list, built and maintained; each new integration opens a vertical for the outbound motion
- **The closing portal:** first franchise agreement already run through it (Rio Açaí)
- **Batch activation engineering** with Kayden: a brand connects 30 to 200 units in one motion

DOES NOT OWN

- **Product strategy and prioritization.** Kayden's, with Taylor on product management
- **Services delivery.** Jared's world
- **Sales and the pipeline.** Shideler's

Where the roadmap goes from here, per the alignment doc: POS and payments first, then labor, payroll, and scheduling data to round out the picture a CFO needs, and the royalty AR/AP rails (the bill.com / Ramp layer for franchising) as the build climbs the compliance ladder.

2 · THE NUMBER THIS SEAT MOVES

Activated units. The weekly counter is the scoreboard.

Product's revenue IS activation: a signed brand pays nothing real until its units are connected and collecting. The weekly "units live" counter, the activation window per brand, and the batch motion are the seat's operating reality. Deka took six weeks for one brand; the machine being built makes the same effort yield ten times the units. When the year lands, the pool is ~1,300 units and the standard is all of them.

NEAR-TERM, FROM THE WEEK PLAN	WHY IT MATTERS
Melty in 3 weeks	The proof that the six-weeks-to-activate era is over
Invoice 2-way sync	Unblocks three brands at once, and it is the literal ask from 2nd Family
Closing portal v1	Teri sees it live on her books this month; the agreement-formatting bug closes with it

3 · COMPENSATION AND EQUITY

Same architecture as everyone: salary now, the gate pays everyone at once, equity for what compounds.

LAYER	TERMS
Salary	Current salary continues unchanged. **At the $2.0M gate, bands step up for the whole team at once**: one number, everyone's payday.
Equity	A grant from the **Rollup option pool** (20% of the product company, with 10 points reserved for team grants beyond the two role paths). Standard terms across the company: 4-year vest with credit for time served, 1-year cliff, double-trigger acceleration, vested is yours forever.

Deliberately open, to be set with you: the grant size and any milestone gates get finalized in a direct conversation with Taylor and Kayden, not filled in behind your back. This document defines the seat; the grant conversation completes it. Pay conversations run through Taylor, same rule as everyone.

4 · THE CADENCE

Live feedback, not Slack threads.

Daily	Standup: Matt, Kayden, Taylor, Shideler, Jared
Friday	Metrics recap: the units-live counter is product's headline number · next week's priorities · the raving-fan boards
Quarterly	Scorecards re-signed alongside the rest of the team
