COVERPANDA · POSITION OUTLINE · CONFIDENTIAL

CTO, Rollup. The activation machine and the rails.

Co-founder of the product company and owner of everything technical: the architecture, the data layer, the integrations, and the machine that turns signed brands into connected, collecting units in batches. The metric is one line: **activated units = revenue.** Every unit under a signed brand, live. All of them.

$80K
salary today, deliberately under market · seed CTO band ~$130–140K at the $2.0M gate or the raise

40%
of Rollup, founder common, same vest treatment as Taylor's

0% → 3%
of the services umbrella, held direct: product fundraising never touches it

~20.4%
look-through services position via Rollup's 51%, the largest indirect stake in the company

1 · THE POSITION

Build less, activate more. And become a student of the CFO job.

OWNS

- **Architecture and the data layer**, end to end
- **Integrations:** POS and payments first, expanding into labor, payroll, and scheduling data to round out the picture a CFO actually needs
- **The activation machine:** connected AND collecting, in batches. A brand connects 30 to 200 units in one motion; a firm connects a whole book
- **The CFO stack and the compliance-layer roadmap:** we build what the CFO needs, with Jared as customer zero and the strongest voice on that roadmap
- **Matt:** payments + POS integrations, reporting to this seat

DOES NOT OWN

- **What services sells.** Jared's
- **How books get done.** The 11/10 delivery standard is services doctrine
- **The franchisee experience** as it scales: that gets a dedicated owner

The standard the whole plan leans on: 100% of units under a signed brand activated within the activation window of the close date. The weekly number is a rate, not a count. Deka took six weeks for one brand; batching is how the same effort yields ten times the units.

2 · CASH COMPENSATION

Under the seed band on purpose, with the gap written down.

LAYER	TERMS
Salary · $80K	Deliberately below the seed CTO band (Kruze 2026: ~$134K). **The gap between actual and market pay is recorded every quarter**, so it is owed, not forgotten.
True-up	The unpaid work is real and it gets paid: the catch-up claim (sourcing, migration, partnerships, infrastructure buildout) is scoped together in one sitting, converted to a defined amount at a fair rate, and paid from services cash flow ahead of any distributions. Cash for past work, not permanent points.
The $2.0M gate	**Hit the target and three things happen at once:** the cash bonus pool pays, salary steps to the seed band (~$130–140K), and the first equity rung economics land. One number, three payouts.
Profit sharing	Pinned, deliberately. Reinvest first, hold a reserve, then share; negotiated at a dedicated session once there is profit worth arguing about.

3 · THE FULL EQUITY POSITION

40% of the product company, plus the only dilution-proof services stake in the structure.

HOLDING	WHERE	TERMS
40%	Rollup, the product company	Founder common, same 4-year vest with credit for time served as Taylor's.
0% → 3%	Services umbrella, **held direct**	**Dilution-protected: product fundraising never touches it**, and it accelerates in full if product winds down or this seat is pushed out without cause. Gates: **the line-2 technical foundation at the $3M rung · an acquisition migrated end-to-end on these rails at $6M**. It exists to hold this position level through two rounds of product dilution.
~20.4%	Look-through via Rollup's 51%	The largest indirect services position in the company. Every arm added under the umbrella makes it worth more without diluting it.

Who funds whom, and the vesting standard

This seat funds all three umbrella ladders through Rollup's earn-down from 100% to the 51% floor (~19.6 look-through points forgone), and Taylor, Jared and Shideler each trim one umbrella point to fund the direct 3% stake. Every grant is an exchange, not a gift. Vesting on everything: milestone + 4-year time vest with credit for time served · 1-year cliff · double-trigger acceleration · missed quarters delay, never forfeit · vested is yours forever. Rollup's voting control never moves; its economic share steps down if it misses its quarterly obligations to Services.

4 · WHAT THE POSITION IS WORTH

The same scenario math as everyone else at the table.

SCENARIO	POSITION VALUE	WHAT HAS TO BE TRUE
The floor	**~$15M**	$6M of revenue, but the platform multiple never earned: services trades at services multiples
The thesis	**~$22M**	Same revenue, margin at ~65%, product at half the mix, the blended 12–18× earned
The bar	**~$65–80M**	Haven/Delightree pace applied to our base: ~$19M by 2029

Illustrative, from the internal value bridge: layered arm → umbrella → Rollup waterfall, sum-checked. Fundraising scenarios dilute the Rollup side only (one round ~×0.9, two rounds ~×0.73); the direct 3% exists precisely so those rounds never touch the services stake. Not a valuation, a shared way of seeing the same future.

5 · THE CADENCE

Position problems get named at the month mark, not year-end.

Daily	Standup: Matt, Kayden, Taylor, Shideler, Jared
Friday	Metrics recap · the weekly "units live" counter · next week's priorities · the raving-fan boards
Monthly · 90 min	The four leads: what's falling off, what changes
Quarterly	Tranche check: issued or missed · scorecards re-signed · the salary gap recorded

The checkpoint philosophy cuts every direction: if activation lags sales, that miss is product's and it is tracked that way, the same way sold-not-sourced misses are sales'. Nobody rides a dead structure, and nobody gets ambushed by a review they didn't see coming.
