

Founding Head of Sales. One metric. Real ownership in both companies.

You are employee-one of the revenue organization. Your metric is new logos that convert to activated revenue. Everything in this document (cash, commissions, equity in the product company, equity in the services company) keys off that one number, so there is never a question about what your job is or what it pays.

\$160–235K

on-target earnings this year, at quota and at stretch

5%

of Rollup, the product company, back-weighted on your cumulative number

5% → 14%

of the services umbrella: 5% granted now, the rest earned at company gates

Uncapped

15% accelerator past quota. No ceiling, ever

You own the revenue. Everyone else owns making it real.

YOU OWN

- **The outbound sales motion:** process, sequences, cadence, messaging
- **The pipeline:** always-accurate pipeline and revenue in HubSpot
- **New logos and partnerships** → activated Net New ARR
- **The brand relationship:** you sourced it, you own it, one voice per brand

YOU DO NOT OWN, AND SHOULD PUSH BACK IF ASKED, INCLUDING ON TAYLOR

- **Delivery and fulfillment.** Jared's. You never take a services demo; there are no services demos in your job
- **Activation engineering.** Kayden's. Sold-but-not-activated is product's miss, not yours, and product is accountable to you for lag
- **Unit-level tracking and bookkeeping close.** Services'. Their 50% conversion responsibility, not yours

The two words in your title, defined precisely

A logo

A new brand signed to a contract: the platform (\$249/mo), its units connected (\$46/unit/mo), and brand-level CFO/billing where you attach it. A logo is counted when it is signed *and* activated. A signature that never goes live is not a logo, it is a lead that died in implementation, and implementation lag is product's accountability to you.

A partnership

What the logo becomes after the sale. The brand names us preferred vendor and hands its franchisees to services for bookkeeping and accounting. That handoff relationship is yours to keep healthy: you are the sales check-in: you coordinate updates back to the brand on accounts sold, new franchisees onboarded, and services attached. You submit that report. You run brand trainings with services so referred franchisees close at better than 50%. You make sure they are happy and keep sending. You do none of the delivery: no demos, no books, no fulfillment. You source, you cultivate, you keep the referral engine warm. Down the road these accounts get an account manager; until then the relationship voice is you.

The 50% close rate on brand-referred franchisees is a shared number: services owns the close, you own the brand's confidence and the training that keeps referral quality high. It is the accountability sales and services hold each other to.

Company target: \$2M ARR exiting 2026. Stretch: \$2.5M.

Today the company sits around \$800K, and live Stripe reporting replaces estimates from here. Here is how the two companies get to \$2M, and which part is yours:

	TARGET	STRETCH	WHERE IT COMES FROM
Services	\$1.25M	\$1.5M	Existing pipeline + Terry's book (Taylor owns that onboarding) carries services to \$1.25M on its own. The last ~\$250K exists only if sales adds new brands whose units feed bookkeeping , roughly 50 new accounts from the logos you land. That stretch is you.
Product	\$750K	\$1M	Your primary lane. ~\$250K is the current run-rate. The ~\$500K of net-new product and CFO revenue on top is your signed-and-activated contribution. Stretch to \$1M = CFO/billing attach + in-year unit openings on the same logos.
Company	\$2M	\$2.5M	Target is the platform math. Stretch is attach and unit growth on the same twenty logos.

Read the product line again, because it is your job description in one sentence: the company needs ~\$500K of net-new product + CFO revenue this half that does not exist in any current pipeline. That is what the comp plan, the equity ladder, and the pipeline math below are all built around.

The per-brand economics, so every deal prices itself.

The ICP: a growth-stage franchisor, ~40 units open, 50–100 sold

Why this profile: at 25–50 open units they are too big for spreadsheets and too small for enterprise software, so nobody serves them. They have real royalty pain a CFO feels monthly.

And **sold-but-not-open units are the services runway**: every location that opens needs books from day one, and we are standing there as preferred vendor when the doors open. A brand with 100 sold and 40 open isn't a \$25K account; it is a \$25K account with sixty more units queued behind it. The POS coverage list (Mindbody; Square, Crisp, Stripe, Toast) is the targeting filter, not a preference.

COMPONENT	MATH	WHAT IT MEANS
Growth-stage brand (~40 units)	$(\$249 \times 12) + (\$46 \times 40 \times 12)$	\$25,068 ARR , the standard deal
Flagship (Swig-scale, ~200 units)	$(\$249 \times 12) + (\$46 \times 200 \times 12)$	~\$113K ARR , one flagship ≈ four and a half growth-stage brands
Onboarding growth	~12 units opening per brand per year × \$552	~\$6.6K ARR/yr per brand , compounding on every logo you have ever signed (~\$3.3K realized in the signing year)
CFO / billing attach	~\$950+/mo brand-level services, where sold	\$11K+ per brand : the brand pays us to run its own finance layer: consolidated reporting, royalty billing, the CFO stack. Counts toward your OTE

The blend, backed out: why "twenty logos" is the number

3 flagships × ~\$113K	~\$340K
~17 growth-stage × \$25,068	~\$426K
Target: 20 logos, platform alone	~\$766K ✓ clears the \$750K target

+ CFO/billing attach on roughly half the logos	~\$137K
--	---------

+ in-year unit openings across the base	~\$66K
---	--------

Stretch: same 20 logos, fully worked	~\$970K–1M
--------------------------------------	------------

Target = the platform math. Stretch = attach + unit growth on the same logos. You do not need more logos to hit stretch. You need the twenty you signed to be fully worked: CFO attached, units opening, franchisees converting. That is why the partnership half of your title matters as much as the logo half.

Where the twenty logos come from.

LANE ONE · INTERNAL BACKFILL

Round out the brands we already serve: ~\$200K sitting on the table

Every brand where we already do accounting or CFO work, and every brand partially on product, gets fully connected and collecting. These are warm accounts where we already deliver the expensive part; the platform is a small add on an invoice they already pay. No cold outreach, no new trust to build. This is the fastest revenue in the company and it is first because it de-risks your year before a single cold email sends.

LANE TWO · FLAGSHIPS

Swig now. You name the one or two you hunt next.

A flagship is a category-defining brand at roughly 100+ open units. Swig-scale is ~200 units and ~\$113K of platform ARR on its own. Flagships matter beyond their revenue: they are the reference logo that makes every growth-stage brand in their category easier to close ("the brand you know runs on us"), and their unit volume feeds services in batches. These are strategic, deliberate hunts: you name the targets, Taylor co-sells with you. One or two more flagships this year alongside Swig covers nearly half the target on three contracts.

LANE THREE · THE MINDBODY OUTBOUND MOTION

~1,800 brands, 63 Tier-1 targets queued today. You own the sequence.

The automated motion into the health-and-wellness vertical, where our Mindbody integration is the wedge. Taylor owns the plumbing (site, forms, routing). You own revenue: what gets clicked, which message converts, which asset works, and the tuning loop every week. Tracked end to end in HubSpot. At a conservative 2% conversion the model shows ~\$1.5M over six months, so even the low end covers the goal. This lane is also the repeatable machine: what you learn tuning it becomes the playbook for the next vertical when the next POS integration ships.

\$3M of demo-taken pipeline closes ~33% → \$1M. That is the whole model.

Quota: activated Net New ARR	\$1.0M
Close rate on demo-taken pipeline	~33%
Pipeline you must build and hold	~\$3M, always
For the \$1.5M stretch	~\$4.5–5M of pipeline

Pipeline = demo taken. Not a list, not a reply, not a conference conversation. A brand counts in pipeline when a decision-maker has sat through a demo and the deal has a dollar value in HubSpot. This definition is strict on purpose: it is what separates a pipeline you can forecast against from a spreadsheet of hopes.

What the job looks like day to day: the sequence running and tuned (lane three), demos booked and taken, flagship pursuit moving (lane two), backfill calls closing (lane one), and partner brands checked in: the report submitted, the trainings scheduled, the referral engine warm. Weekly pipeline + revenue report to Taylor. If the \$3M is real and the motion is running, the quota takes care of itself; every review conversation starts with the pipeline number, not the revenue number, because pipeline is the leading indicator you control.

Lean base, market commission, uncapped accelerator.

COMPONENT	TERMS, AND WHERE THE NUMBER COMES FROM
Base · \$80K	Raised from \$60K in the final rebalance: a \$20K higher guaranteed floor, traded against a lower base commission rate so the OTE stays exactly where it was. The floor that justifies it is unchanged: ~\$300–400K of activated Net New ARR per year is table stakes, and your equity carries the real weight until the raise. Post-raise, base steps to market for a funded revenue leader (~\$120–180K).
Quota · \$1M	Activated Net New ARR. Activated means live and collecting, not signed. The \$1.5M stretch is the same motion with the stretch composition: the CFO attach, the in-year openings, and the extra units your logos hand services.
Commission · 8%	8% of activated Net New ARR you source (rebalanced from 10% against the higher base). Past quota the rate steps up to 15%, uncapped. Every dollar past \$1M pays nearly double the base rate, with no ceiling, because we want you blowing through it, not managing to it.
OTE · \$160K / \$235K	The math, so nothing is mysterious: at quota: \$80K base + (8% × \$1M = \$80K) = \$160K . At stretch: \$80K + \$80K + (15% × the \$500K past quota = \$75K) = \$235K . Same OTE as every prior version of this deal: the rebalance moved \$20K from at-risk to guaranteed, it did not move the target. Past stretch it keeps going; there is no cap on the accelerator.

Mechanics

Paid quarterly on MRR	Commission pays as cash is collected, with true-ups, so cash out follows cash in. Signed agreement + payment received + clean handoff = your job on that account is done.
Activation-gated	Revenue that never goes live never pays. And the gate cuts both ways: product is accountable to you for activation lag. Sold-not-activated is their miss, not yours, and it is tracked that way.
One reconciliation rule	Every new revenue source reconciles with Taylor before it is submitted. No exceptions, in both directions. When you talk pay, you talk to Taylor.

What is yours, what pays, and why the rates differ.

Two questions decide every credit: **who found the brand**, and **who does the work**. One rule removes every gray area: **total selling cost on any deal is capped at 15% of first-year revenue**, and commissions and referral fees come out of that same budget. Full rate when you sourced it. 5% when you close house inbound. The remainder after the referral fee when a partner brought it. And bookkeeping revenue pays you a channel bonus even though services does every hour of the delivery, because your logo created it.

REVENUE	YOU SOURCED THE BRAND outbound, your network	CHANNEL-REFERRED partner, broker, or brand intro · referral fee owed
Product + brand-level CFO/billing	8% commission + full OTE credit , counting fully toward your quota and your equity gates (house inbound you close: 5%, full credit)	OTE credit + what remains of the 15% budget after the referral fee, up to 5%. Negotiation discretion is real: negotiate the partner to 10% and you keep the remaining 5%. If the fee consumes the budget, cash is zero but your quota still gets the full credit.
Bookkeeping fees services closes these; the 50% conversion is their responsibility	OTE + equity-threshold credit, plus 5% of first-year collected fees , paid quarterly as collected, for accounts created within 12 months of the brand going live	No credit, no commission. The referral fee consumed the entire budget on that revenue. Nothing remains to pay a second commission.

The 12-month window, in plain words

When a brand you sourced goes live, a clock starts. Every franchisee from that brand who becomes a bookkeeping account within the next twelve months pays you 5% of their first-year collected fees. After twelve months, new accounts from that brand are the account manager's book, not your bonus. The window is your reward for the introduction and the launch, not a perpetual royalty. Fees are paid quarterly, as the cash is actually collected.

Why the 5% channel bonus is real money

One sourced 40-unit brand, 50% of units convert

≈ 20 bookkeeping accounts

20 accounts × ~\$5.4K first-year fees

≈ \$108K to services

Your 5%

≈ \$5.4K per brand, on top of product commission, for revenue you never fulfill

Twenty logos at that shape ≈ \$50–100K of channel bonus flowing behind your product commissions over the following year. It is the mechanism that pays you for the partnership half of the job.

0% → 5.0%, six tranches, back-weighted on your cumulative number.

Cash pays for the period; equity pays for what compounds. Every logo you land makes the product company permanently more valuable, so that is where your earned equity concentrates. The ladder is back-weighted on purpose: the last two tranches are worth six times the first two, because \$10M is the prize, not \$1.5M.

TRANCHE	GATE · CUMULATIVE ACTIVATED NET NEW ARR	GRANT
1	\$0.5M	+0.25%
2	\$1.0M · this year's quota	+0.25%
3	\$2.5M	+0.5%
4	\$4.0M	+1.0%
5	\$6.0M	+1.5%
6	\$10M	+1.5%

The two-key vesting system

Each tranche needs both keys: **the milestone** (did the cumulative number hit) and **the time vest** (a four-year schedule measured from your original start date, one-year cliff; the time you have already served counts, and that is your head start). When a milestone hits, the time-accrued portion vests immediately and the remainder rides the original schedule. No tranche ever restarts its own clock.

A missed quarter delays, never forfeits Gates are cumulative. Slow quarter, the tranche waits for you. It does not disappear.

Earned and vested = yours Not subject to any discretionary review, ever.

Double-trigger acceleration Change of control + termination without cause = everything accelerates. You cannot be bought out of your upside.

Independent of title

No tranche depends on any role change. The ladder is your economics regardless of what the org chart says.

5% granted at signing. A ladder to 14%. Same gates as the founders.

This replaces everything previously discussed through the old B&B vehicle. That structure is gone. The services company is one umbrella: Rollup holds a 51% floor, and the incentive side is held directly by you, Taylor, and Jared on identical ladder architecture. Direct means direct: **this equity does not dilute when the product company raises money.**

RUNG	COMPANY GATE · BLENDED COLLECTED ARR	GRANT	YOUR PERSONAL KEY
Starter	Granted at signing · founding recognition, one-year vest	5%	.
Rung 1	\$2.0M · this year's company target	+3%	\$1M cumulative activated sales-sourced ARR (your quota)
Rung 2	\$3M	+4%	\$2.5M cumulative sales-sourced
Rung 3	\$6M + second service line live	+3%	A channel program built and producing: 3+ active partners generating referred revenue
Ceiling	15% earned – 1% = 14%		see the funding note below

Where the 1% goes, because you should know: you, Taylor, and Jared each contribute one point of your earned ceiling to fund Kayden's direct services stake, and Kayden funds all three of your ladders through Rollup's earn-down from 100% to the 51% floor. Everyone funds everyone. Nobody's equity is a gift from Taylor; it is an exchange between the four of you.

Why rung 1 matters most: it is gated on the exact number this whole document commits you to: the company at \$2.0M with your \$1M quota inside it. Hit this year's plan and 8% of the services umbrella is yours within roughly twelve months of signing. The first rung is not years away. It is this year's work.

Where the ladder tops out

The umbrella ceiling is 14%. The long-run prize lives on the product side: your **\$10M** cumulative gate pays the final **1.5% of Rollup** (section 8), so the ladder never goes flat for the person who keeps producing after the last rung.

The same math the founders are using. Nothing here is a different deck.

●	○	○	○	○	○
~\$800K	\$2.0M	\$3.3M	\$5.6M	\$9.0M	\$55–100M+
company today live Stripe reporting	2026 target rung 1: you at 8%	2027 model rung 2: you at 12%	2028 model	2029 model rung 3: you at 14%	illustrative enterprise value at the \$6M gate

IF WE EXECUTE	YOUR CASH	YOUR EQUITY POSITION
2026 at stretch	~\$235K OTE + channel bonuses	8% of the umbrella earning + Rollup tranches 1–2 earned (0.5%), the \$2.5M gate in reach
2027–28	OTE grows with quota, into \$300K+ years as the number scales	12% umbrella · the back-weighted Rollup tranches start paying their real weight
Fully earned	Uncapped accelerator on a much larger quota	14% of the services umbrella + 5% of Rollup. On the same scenario math the founders are using, that position is worth roughly \$4M at the floor case, ~\$7M on the thesis multiples, and \$18–23M at the bar pace , on top of every commission check along the way.

Illustrative, same assumptions as the founder model: the floor is \$6M of revenue at services multiples, the thesis is the same revenue with margin at ~65% and product at half the mix, the bar is Haven/Delightree pace. The point is not precision. Your worst case is a market OTE. Your good case is life-changing.

Scope first. Title with the org. The path is real and the criteria are objective.

The leadership path runs Head of Sales → VP Sales → CRO as the revenue organization becomes real. The criteria are objective, not political: forecast accuracy, a documented repeatable sales process, reliable reporting and handoffs, and demonstrated ability to hire and manage a revenue team. The title decision is made when there is a revenue organization to lead, realistically at or after the raise, and none of your equity depends on it. The ladders in sections 8 and 9 are your economics regardless.

CADENCE	WHAT
Weekly	Pipeline + revenue report to Taylor. The \$3M pipeline number leads every conversation
Monthly	Commission reconciliation · the four-person leadership accountability session: what's falling off, what needs to change, said out loud at the month mark rather than year-end
Quarterly	Commission paid on MRR · tranche check: issued or missed
Semi-annual	Position review

The checkpoint philosophy

The rungs are cumulative and never forfeited, but they are also checkpoints. If December 31 arrives and the company is nowhere near \$2M, all four of us are back at the table asking what went wrong, with the data to answer it: how many demos, what close rate, what shipped, what converted. That conversation cuts every direction: sales, product, services, and Taylor. Nobody rides a dead structure for years, and nobody gets ambushed by a review they didn't see coming.

New service lines: the standing door

Every future service line (lending included) is born under the umbrella, and the operator who runs one earns up to 25% of it, with launch gated on proven demand, a funded budget, and founder approval. Your 14% of the umbrella means you own a share of every line that launches whether you run it or not. And if the day comes that lending is real and you want to operate it, that door has a defined shape instead of a maybe.

Next step: you co-set the goals

This document sets the structure. The specific H2 goals (the flagship count you commit to, sequence benchmarks, weekly demo pace, the 90-day ramp) get set with you, not for you, in the goal-setting session with Taylor. Bring your own numbers.

Conduct, conflicts, and outside interests are governed by employment/COI/IP terms and the Team Operating Standards, not by equity conditions. Instruments, 83(b), 409A, and leaver terms ratify with counsel. · CoverPanda · confidential
